

01 - Master Assignment Blueprint

What the company requires, how it will be judged, and the safest build plan

GROW MY THERAPY - STAGE 2 SELECTION ASSIGNMENT

1. What this assignment actually is

This is a front-end internship selection task. The core job is not to invent a completely new site: first reproduce the supplied Conejo Valley Family Counseling homepage layout accurately, then keep that structure while replacing the theme, all homepage copy, and all imagery using the fictional Dr. Maya Reynolds profile as the single source of truth. A new Our Office section must also be added.

KEY DECISION Do not over-engineer the assignment. The evaluation is primarily visual accuracy, design judgment, client-facing copy, imagery, and the five-minute walkthrough. A backend is optional unless you intentionally add a working contact form.

2. Non-negotiable requirements

Requirement	What you should deliver
Framework	Next.js + Tailwind CSS. Component libraries are allowed.
Part 1	Clone layout, spacing, structure, responsive behavior, section order, hierarchy, typography and styling of the reference homepage.
Part 2	Create a different cohesive theme; replace all images; rewrite all copy from Dr. Maya Reynolds profile; choose three profile-based services; tailor About + FAQs; apply local SEO.
Part 3	Add a completely new Our Office section using the provided office details and office images.
Part 4	Record a 5-minute Loom walkthrough presented as a client demo, including desktop and mobile, in non-technical language.
Deliverables	Live deployed site, public GitHub repository, Loom video link.
Deadline	Submit within six days of the date Internshala records that you received the assignment.

3. Scoring priority - allocate your time accordingly

Area	Weight	Recommended effort
Communication / Loom	30%	Prepare and rehearse the walkthrough; explain benefits, not code.
UI cloning accuracy	25%	Measure spacing, widths, hierarchy and breakpoints carefully.
Theme & design sense	25%	Make the redesign feel calm, premium, trustworthy and visually coherent.
Copywriting & images	10%	Every claim must come from Maya profile; imagery must feel intentional.
New section creativity	10%	Office section should feel native to the template, not bolted on.

4. Reference homepage structure to preserve

The current public homepage uses a quiet editorial therapy aesthetic: a slim navigation, asymmetric hero, large serif-led headline, supporting imagery, generous white space, editorial text blocks, audience/service cards, areas of expertise, an approach section, specialties, a strong booking/therapist-fit call-to-action, and a simple contact/footer area. Preserve the layout grammar and section hierarchy even when the content changes.

1. Header / navigation with restrained branding and clear CTA.
2. Hero: local-service eyebrow, large emotional H1, supporting sentence, primary CTA, offset editorial imagery.
3. Empathy / problem-awareness introduction.
4. Audience or service grid using strong photography and short labels.
5. Emotional statement / visual breathing section.
6. Expertise or concerns list.
7. How I work / therapeutic approach narrative.
8. Three focused services for Maya (use the original layout pattern, not the original service content).
9. About / therapist-fit area using Maya portrait and bio.
10. NEW Our Office section with two to three profile office images and Santa Monica details.
11. FAQ accordion or FAQ layout using profile-supported questions only.
12. Final CTA + footer / location information.

5. Dr. Maya Reynolds - source-of-truth content map

Profile fact	How it should appear on the website
Location	Santa Monica, California. In-person sessions at the Santa Monica office; secure telehealth for clients

	located in California.
Client focus	Adults, especially thoughtful/high-achieving people who feel anxious, overwhelmed, overextended, perfectionistic, burned out, or affected by past experiences.
Main concerns	Anxiety, panic, trauma, burnout, perfectionism, chronic stress, sleep difficulty, relationship/safety impacts from earlier experiences.
Approach	Warm, collaborative, grounded; supportive structure with room for reflection and depth.
Modalities	CBT, EMDR, mindfulness-based practices, body-oriented techniques.
Trauma philosophy	Carefully paced, safety and stabilization first, with a goal of helping clients feel more regulated in daily life.
Office	Quiet, private, calm and grounding; natural light; comfortable, uncluttered environment.
Outcome language	Insight, resilience, stronger relationship with self, more sustainable ways of living and working - not only symptom relief.

6. Recommended redesigned content

Hero

Eyebrow: IN-PERSON THERAPY IN SANTA MONICA + SECURE TELEHEALTH ACROSS CALIFORNIA

H1: Anxiety & Trauma Therapy in Santa Monica for Adults Ready to Feel Grounded Again

Subtext: Practical, depth-oriented therapy for anxiety, panic, trauma, burnout, and perfectionism - with a warm, collaborative approach that supports both mind and body.

CTA: Explore Therapy Options | Secondary CTA: Meet Dr. Maya

Three services

Service	Suggested homepage copy direction
Anxiety & Panic Therapy	For constant worry, overthinking, physical tension, sleep difficulty and feeling emotionally on edge. Use CBT, mindfulness and body-aware tools without promising outcomes.
Trauma & EMDR Therapy	For single-incident or longer-standing trauma. Emphasize pacing, stabilization, safety and EMDR as one evidence-based method Maya integrates.

Burnout & Perfectionism Therapy	For professionals, entrepreneurs and creatives who have spent years pushing through stress and now feel disconnected, exhausted or pressured internally.
---------------------------------	--

7. Suggested new visual direction

KEY DECISION Keep the original composition, but make the redesigned site visibly different from Conejo Valley. Avoid beach imagery because it is a strong signature of the reference site.

Token	Recommendation	Use
Primary	#24352F - deep eucalyptus	Headings, dark sections, navigation accents
Secondary	#E9DED0 - warm oat	Soft section backgrounds, cards
Accent	#B8795B - muted terracotta	CTA, links, small highlights
Surface	#FAF8F4 - warm ivory	Main background
Text	#242723 - charcoal	Body copy

Typography direction: use an elegant editorial serif for display headings and a modern humanist sans-serif for body/UI. For Part 1, copy the reference font from browser computed styles exactly; for Part 2, changing the font pairing is acceptable if the overall layout is preserved and the new system remains cohesive.

8. Build sequence that minimizes rework

- Capture the reference homepage at desktop, tablet and mobile. Record section order, max widths, card grids, image aspect ratios, spacing and typography.
- Create a neutral clone first. Do not redesign while cloning. Validate against screenshots at the three breakpoints.
- Extract content from Maya profile into a typed content object before writing JSX.
- Create design tokens as CSS variables/Tailwind theme values. Switch the clone to the new palette in one controlled pass.
- Replace copy section by section using only the profile-supported facts. Never invent insurance, pricing, credentials beyond PsyD/licensed clinical psychologist, contact information, availability or treatment guarantees.
- Replace all imagery. Use Maya portrait and exact office images from the profile; choose new intentional supporting images for other sections.
- Add Our Office after the therapist/about area or shortly before FAQs/final CTA. It should feel like part of the narrative journey.
- Run responsive QA, keyboard QA, Lighthouse, accessibility checks, and visual-regression comparison.
- Deploy to Vercel, test production URLs on a real mobile device, then record the Loom walkthrough.
- Clean README and public repository; submit all three links before the deadline.

9. Definition of done

- No horizontal scrolling at 320px, 375px, 768px, 1024px and large desktop widths.
- No placeholder text, broken image links, generic lorem ipsum, or claims not supported by Maya profile.
- All interactive controls are keyboard accessible and have visible focus states.
- All images use meaningful alt text; decorative images use empty alt text.
- Every section uses the same spacing scale, radius language, button style and typography system.
- Mobile navigation is clean and the FAQ interaction does not cause layout jank.
- The fictional assignment site is marked noindex to avoid misleading real search users, while still demonstrating SEO metadata and semantic structure.
- GitHub repository contains setup instructions, design rationale, source attribution notes and no secrets.
